

Requirements Document

The layout of the website is given below:

Site Menus:

[Each page information is given below]

1. HOME PAGE:

It will contain a simple welcome message for the visitors.

2. ABOUT ME:

It has three submenu items (drop down menu), which will appear when the user mouse over on this menu item [as shown in above picture]. If a user clicks on this menu item, he will be redirected to the personal info page.

3. PERSONAL INFO:

In this page, your personal information will be shown, like first name, last name, parent's name, address, contact information etc.

4. EDUCATIONA INFO:

In this page your education information will be listed.

5. WORK INFO:

In this page your work information will be listed.

6. CONTACT ME:

This page will contain a form with the following fields,

- a) Name
- b) Email
- c) Subject
- d) Message (a multiline text box)
- e) A button to submit the form

[all the fields are required; check for valid email; you have to check that using ***javascript (don't use HTML5 attribute)***]

To store the submitted information of this form, create a database named “lab_final” and a table using your class roll (for example 1401) in that database with the above fields and store the submitted information in that table.

7. ADMIN:

Clicking on this will load a login form, using which the admin of the site will login. You can check the login information by hard coding username (say ‘admin’) and password (say ‘123456’) in the php file or use a database table to store the login information. After successful login, user will be redirected to the “CONTACT ME LIST” page.

8. CONTACT ME LIST:

This page will show a table filled by the contact me page’s submitted data retrieved from the database table. Only logged in admin users can access this page. If a user clicks on this link, s/he will be redirected to the login page.

Instructions:

1. Create a folder with your roll number (like 1401) and create all the files and folders inside that folder. Take a backup of your database and put it in this folder during the submission time. Create a zip of this folder and upload it in the google classroom.
2. Name the js and css files using your roll number.
3. Use only html, css, js, php and mysql to complete the assignment
